Hi, Jeni.

We have recently drafted a fact sheet about the CFAC site (attached). In it we are wanting to answer some questions folks in the community have asked about contamination at the site and the cleanup.

One of the questions refers to the safety of the municipal drinking water supply for Columbia Falls. In the fact sheet, this is the Q&A we have included:

**Is the Columbia Falls water supply impacted?**

EPA does not have any data that indicate Columbia Falls' municipal water supply is impacted. Columbia Falls' water supply is a groundwater source more than three miles from the sampled source areas. The municipal wells are sampled regularly as part of the federal Safe Drinking Water Act requirements for municipal water supplies.

Since the drinking water program is delegated to the state, we want to run the highlighted text by you and/or the folks in your program. Is it accurate and does it convey the appropriate information? If not, please send me your edits, and we can make any needed changes.

Thanks for your assistance!  
Cynthia
